

## Folding A Topographic Map Properly

**1.** Lay your map flat and face up

**2.** Fold/crease lengthwise into fanfold strips as indicated above. The map should fold like an accordion.

**3.** Your folded map should now look like this.

**4.** Make sure that the Livermore title is facing up on both the top and bottom of the map.

**5.** Fold/crease as indicated above. Again, the map should fold like an accordion.

**6.** Your folded map should now look like this.

- **Your map should fold like an accordion in both directions,** very simply, no complicated map folding..., it's not origami
- The Livermore Map title should be showing on both sides of your folded map (see next page of these instructions)
- **7.** PRINT your name, in ink, near the Livermore Title on both the top and bottom of the map. Everyone in this class (and other classes) has a copy of this map. The ones with no names belong to whoever asks for them.
