

Looking for a transfer level math class?

You may not have to take Statistics or College Algebra to satisfy your transfer math requirement. Consider this option:

Math 33 Finite Mathematics

This 4-unit course will introduce you to fundamental concepts in:

- Financial math
 - Learn about compound interest, amortization of loans, and annuities. Understanding these basic financial terms can help you in future financial planning.
- Probability
 - Learn the basic principles for calculating the probability of events (what is the probability you will win the lottery?)
- Linear programming
 - Learn about a fundamental planning and prediction tool widely used in the business world to make distribution and marketing decisions

In addition, you will learn how to use a TI-83 graphing calculator to solve problems involving matrices, graph linear equations, calculate loan payments, etc.

See the Schedule of Courses for the current offerings.

CHECK WITH YOUR COUNSELOR OR TRANSFER INSTITUTION TO SEE IF THIS COURSE WILL WORK FOR YOU.
